Training

TRAINING:

PEGA SENIOR SYSTEM ARCHITECT

Brochure

The Pega Senior System Architect training is an advanced technical training course for experienced Pega developers who want to deepen their knowledge in designing and building complex enterprise applications on the Pega Platform. The training is intended for professionals who have already followed the Pega System Architect training and want to develop further towards architecture and advanced application development.

ABOUT THIS TRAINING

The training focuses on the architecture and realization of advanced Pega applications. Topics such as application architecture, class design, data modelling, integrations with external systems, security and performance optimization are discussed extensively. In addition, participants will learn how to develop reusable components and structure applications according to Pega's best practices and design principles.

PURPOSE OF TRAINING

Upon completion of the training, participants will have in-depth knowledge of advanced Pega development and application architecture. The training is also a solid preparation for obtaining the Pega Senior System Architect certification.

CERTIFICATION

After completing the training, you will be largely prepared for the PCSSA (Pega Certified Senior System Architect) exam, which you can schedule through Pega. Upon passing this exam, you will receive the official PCSSA certificate.

WHAT YOU WANT TO KNOW:

DURATION

4 or 7 day training consisting of classroom learning days with time in between for online self-study.

LANGUAGE

The training materials are in English. Classes can be conducted in both EN and NL are provided.

PROFILE FIT

This training is aimed at Developers and Pega System Architects.

RESULT

You have mastered the basic concepts and principles of application development in Pega and are largely prepared for the exam.

METHOD

A combination of online self-study and classroom training delivered by experienced certified Pega Senior System Architects.
